

Solution Description

When the hip roof is inhabited, the insulation must be laid immediately after the tiles support, in some cases it may also be important to install another insulating layer on the lower side of the concrete slab.

The collection of rainwater is made through a gutter, whose function is to collect the falling rain, to transfer and forward it. The gutter may present various sizes and shapes.

1	Ceramic tile CS Coelho da Silva, SA
2	Insulation Amorim Isolamentos, SA
3	Finishing Gypotec Ibérica - Gessos Técnicos, SA
4	Ceramic brick Preceram - Indústrias de Construção, SA
